

Hidden In Plain Sight

E-Cigarettes & Other Drugs: What Every Adult Should Know

Can you spot the **red flags** in a teen's bedroom?

**Tuesday, January 28th, 2020,
6:00-7:30 PM**

Over 100 cases of vaping related lung disease have occurred in Wisconsin. The results of using e-cigarettes and vaping is concerning. Furthermore, did you know there are many common household items and paraphernalia that may indicate youth drug use with marijuana, tobacco, prescription drugs, heroin or alcohol? Youth who use drugs or alcohol before the age of 14 or 15 are 20-25% more likely to develop a drug dependency or addiction in their lifetime.

Hidden in Plain Sight is a presentation and mock bedroom for parents, grandparents, educators and community members. This specific event will allow adults, parents, educators, grandparents and community members to learn more about vaping devices, health related issues, and how youth gain access to these devices. Participants will also learn common household items used as paraphernalia, steps you can take to prevent and intervene if you suspect drug use, and resources available in Fond du Lac County. As a community we have a responsibility to be a part of the solution. So, join us and learn what you can do to prevent youth drug & alcohol abuse.

Free Event!
